Education

B.Sc. Computer Science & Software Engineering, UQAM

Sept. 2023 – May 2027 (Expected)

- 4th place – CSGames 2026, DevOps

Projects

Donate With Athena 🌐 donatewithathena.com 📁 [George-Fam/DonateWithAthena](https://github.com/George-Fam/DonateWithAthena)

- Awarded 2nd place out of 14 teams at Morgan Stanley's Code to Give Hackathon for Shield of Athena, a nonprofit supporting women and children facing domestic violence.
- Collaborated in a 5-person team to design and build a full-stack gamified donation platform using Java, TypeScript, Spring Boot, Angular, MySQL, and REST APIs to increase donor engagement.
- Deployed using Google Cloud Platform (GCP), Docker, and Nginx to containerize backend services.
- Built an AI-assisted social media automation system using n8n to enable centralized, multi-platform posting and streamline content drafting for the nonprofit's marketing team.

Open Source Fork – plezy-tizen 📁 [George-Fam/plezy-tizen](https://github.com/George-Fam/plezy-tizen)

- Used Dart and C# to add Samsung Tizen TV platform support to a Flutter-based Plex/Jellyfin client distributed on the App Store and Google Play, writing a native C# media player from scratch using hardware overlay rendering.
- Used Flutter method and event channels to bridge the Dart UI and the native C# player, implementing playback control, seeking, and TV remote key routing on both sides of the bridge.
- Used GitHub Actions to extend the project's CI/CD pipeline with a Tizen build job, producing a signed TPK artifact for release.

AGEEI.org – Student Association Platform 🌐 ageei.org 📁 gitlab.com/ageei/ageei.org

- Built a full-stack platform with an Angular 21 + Angular Material frontend deployed to Azure Static Web Apps and a Java 17 serverless backend on Azure Functions, with GitLab CI handling automated deployments.
- Delivered Publications page, real-time FAQ search, and collapsible timeline.
- Implemented a dual-trigger calendar sync integrating Directus CMS with Google Calendar via webhooks and a nightly cron job, using Google Workspace service account impersonation.

LaTeX CV & Cover Letter Automation 📁 [George-Fam/Resume](https://github.com/George-Fam/Resume)

- Engineered a PowerShell & Python automation pipeline to generate and compile multi-version LaTeX CVs.
- Implemented GitHub Actions CI/CD workflows to automate document validation, versioning, and reproducible PDF builds, eliminating manual compilation and ensuring consistent artifact generation.

AVL Tree Implementation 📁 [George-Fam/AVLTree](https://github.com/George-Fam/AVLTree)

- Used C++ to implement an AVL tree with set operations and developed tests to validate correctness and performance; ranked 1st out of 116 in class evaluation.

Open Source Contribution – linutil 📁 [ChrisTitusTech/linutil](https://github.com/ChrisTitusTech/linutil)

- Diagnosed and fixed a runtime failure in the Ollama installer script of a 5k-star community Linux toolbox (🌐 PR #1223), restoring a broken installation flow for community users.

Experience

Student Association President at AGEEI-UQAM

Apr. 2026 – Present

Student Association VP of Technology at AGEEI-UQAM

Jan. 2026 – Apr. 2026

- Built a Java app on Azure Functions integrating Directus CMS with Google Calendar via webhooks and a nightly cron job, deployed via GitLab CI.
- Administered a production Azure VM running Vaultwarden, Snipe-IT, and Directus CMS (Redis cache, Google OpenID Connect SSO) via Docker Compose and Nginx, with Cloudflare Full SSL and automated encrypted backups to Google Drive with 30-day retention.
- Set up a CTFd and Nginx competition platform and designed original CTF challenges spanning cryptography, steganography, and reverse engineering. 🌐 easter.ageei.org
- Built a JavaScript dashboard automating graduation photo funding eligibility with HTML email notifications.

Computer Science Teaching Assistant at UQAM

Oct. 2024 – May 2026

- Collaborated with course instructors to design and delivered lab sessions covering Java, Linux, Git, debugging, and object-oriented programming fundamentals.
- Tutored students in core CS courses including Java, OOP, Assembly, Linux, and Data Structures & Algorithms.
- Facilitated Linux workshops and authored an install guide to streamline it. 📁 [George-Fam/LinuxInstallGuide](https://github.com/George-Fam/LinuxInstallGuide)
- Developed lab materials to reinforce data structures and software tooling knowledge. 📁 [George-Fam/UQAM-Labos](https://github.com/George-Fam/UQAM-Labos)

Other Experience

Pharmacy Technician at Jean Coutu	Sept. 2022 – Feb. 2025
– Delivered high-volume customer support and medical data entry, triaging requests while maintaining accuracy, confidentiality, and time-sensitive service targets.	
Assistant Manager at Couche-Tard	Jul. 2018 – Jul. 2020
– Monitored daily cash intake, improving accuracy and reducing discrepancies. – Boosted holiday sales by 12% through effective product promotion. – Organized front-lane merchandise to enhance visibility and drive sales. – Trained new team members on POS systems and customer service.	

Skills

Languages	Java, C, C++ , TypeScript, JavaScript, Bash, PowerShell, Python	Testing	JUnit, Mockito, BATS
Frontend	Angular, Angular Material, HTML/CSS, SCSS, Tailwind CSS	DevOps	Docker, Docker Compose, Nginx, Git, Maven, GitHub Actions, GitLab CI
Backend	Spring Boot (MVC, Spring Data JPA), REST APIs, MySQL, Oracle SQL	Cloud	Google Cloud Platform (GCP), Azure
		Languages	English, French, Arabic
